

Wireless surveillance system in lifts

A CCTV system designed for older lift systems

CCTV system in lifts is one of the features which are often integrated into the security systems in modern buildings and apartment blocks. In the past CCTV monitoring in lifts is a feature found in exclusive top end developments to assure the residents that their security are the apartment's management utmost concern and no expenses is spared to ensure their safety.

With increased global awareness of the need of security, CCTV monitoring in lifts is a desired feature in most buildings and residential apartments. The cost of installing this feature in new developments does not affect the cost significantly, **however to incorporate this feature in lifts of older developments can be a costly affair when it come to installing the cable to transmit the images captured by the camera to the monitor or recording medium.**

The wireless CCTV system is designed to be installed in lifts from older development to enable them to have the facility of monitoring and recording of activities in lift operating in their premises using wireless technology. The cost savings in not having to install the cables is more that adequate to install and implement the wireless CCTV system.
